

# **FS100 OPTIONS INSTRUCTIONS**

FOR HIGH-SPEED ETHERNET SERVER FUNCTION

- Upon receipt of the product and prior to initial operation, read these instructions thoroughly, and retain for future reference.
- This instruction is applicable to both FS100 and FS100L controllers.

#### MOTOMAN INSTRUCTIONS

(FOR SMALL -SIZED MANIPULATORS) MOTOMAN-□□□ INSTRUCTIONS **FS100 INSTRUCTIONS** FS100 OPERATOR'S MANUAL FS100 MAINTENANCE MANUAL

(FOR LARGE AND MEDIUM-SIZED MANIPULATORS) MOTOMAN-□□□ INSTRUCTIONS **FS100L INSTRUCTIONS** FS100 OPERATOR'S MANUAL FS100L MAINTENANCE MANUAL

The FS100 OPERATOR'S MANUAL above is applicable to both FS100 and FS100L controllers.

THIS MATERIAL IS FOR STUDY PURPOSE ONLY YOU MUST READ THE MANUAL WHICH ENCLOSED WITH A ROBOT.

YASKAWA ELECTRIC CORPORATION

- This manual explains the high-speed Ethernet server function of the FS100 system and general operations. Read this manual carefully and be sure to understand its contents before handling the FS100.
- General items related to safety are listed in Chapter 1: Safety of the FS100 Instructions. To ensure correct and safe operation, carefully read the FS100 Instructions before reading this manual.

## **CAUTION**

- Some drawings in this manual are shown with the protective covers or shields removed for clarity. Be sure all covers and shields are replaced before operating this product.
- The drawings and photos in this manual are representative examples and differences may exist between them and the delivered product.
- YASKAWA may modify this model without notice when necessary due to product improvements, modifications, or changes in specifications.
- If such modification is made, the manual number will also be revised.
- If your copy of the manual is damaged or lost, contact a YASKAWA representative to order a new copy. The representatives are listed on the back cover. Be sure to tell the representative the manual number listed on the front cover.
- YASKAWA is not responsible for incidents arising from unauthorized modification of its products. Unauthorized modification voids your product's warranty.

This instruction manual is applicable to both FS100 (a controller for small-sized manipulators) and FS100L (a controller for large and medium-sized manipulators).

The description of "FS100" refers to both "FS100" and "FS100L" in this manual unless otherwise specified.

## Notes for Safe Operation

Read this manual carefully before installation, operation, maintenance, or inspection of the FS100.

In this manual, the Notes for Safe Operation are classified as "WARNING", "CAUTION", "MANDATORY", or "PROHIBITED".

## **WARNING**

Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury to personnel.

## **CAUTION**

Indicates a potentially hazardous situation which, if not avoided, could result in minor or moderate injury to personnel and damage to equipment. It may also be used to alert against unsafe practices.

Always be sure to follow explicitly the items listed under this heading.

Must never be performed.

Even items described as "CAUTION" may result in a serious accident in some situations.

At any rate, be sure to follow these important items

To ensure safe and efficient operation at all times, be sure to follow all instructions, even if not designated as "CAUTION" and "WARNING".

## **WARNING**

 Before operating the manipulator, check that servo power is turned OFF when the emergency stop button on the programming pendant is pressed.

When the servo power is turned OFF, the SERVO ON LED on the programing pendant is turned OFF.

Injury or damage to machinery may result if the emergency stop circuit cannot stop the manipulator during an emergency. The manipulator should not be used if the emergency stop button does not function.

Fig. : Emergency Stop Button

- In the case of not using the programming pendant, be sure to supply the emergency stop button on the equipment. Then before operating the manipulator, check to be sure that the servo power is turned OFF by pressing the emergency stop button.
   Connect the external emergency stop button to the 5-6 pin and 16-17 pin of the robot system signal connector (CN2).
- Upon shipment of the FS100, this signal is connected by a jumper cable in the dummy connector. To use the signal, make sure to supply a new connector, and then input it.

If the signal is input with the jumper cable connected, it does not function, which may result in personal injury or equipment damage.

 Once the emergency stop button is released, clear the cell of all items which could interfere with the operation of the manipulator. Then turn the servo power ON.

Injury may result from unintentional or unexpected manipulator motion.

Fig. : Release of Emergency Stop Button

- Observe the following precautions when performing teaching operations within the manipulator's operating range:
  - View the manipulator from the front whenever possible.
  - Always follow the predetermined operating procedure.
  - Ensure that you have a safe place to retreat in case of emergency.

Improper or unintended manipulator operation may result in injury.

## **WARNING**

- Confirm that no person is present in the manipulator's operating range and that you are in a safe location before:
  - Turning ON the power for the FS100.
  - Moving the manipulator with the programming pendant.
  - Running the system in the check mode.
  - Performing automatic operations.

Injury may result if anyone enters the manipulator's operating range during operation. Always press an emergency stop button immediately if there are problems.

The emergency stop button is located on the programing pendant.

## CAUTION

- Perform the following inspection procedures prior to teaching the manipulator. If problems are found, correct them immediately, and be sure that all other necessary tasks have been performed.
  - Check for problems in manipulator movement.
  - Check for damage to the insulation and sheathing of external wires.
- Return the programming pendant to a safe place after use.

If the programming pendant is inadvertently left on the manipulator, on a fixture, or on the floor, the manipulator or a tool may collide with the programming pendant during manipulator movement, which may result in personal injury or equipment damage.

 Read and understand the Explanation of Warning Labels in the FS100 Instructions before operating the manipulator.

#### Definition of Terms Used Often in This Manual

The MOTOMAN is the YASKAWA industrial robot product.

The MOTOMAN usually consists of the manipulator, the FS100 controller, manipulator cables, the FS100 programming pendant (optional), and the FS100 programming pendant dummy connector (optional).

In this manual, the equipment is designated as follows:

Equipment	Manual Designation
FS100 controller	FS100
FS100 programming pendant	Programming pendant
Cable between the manipulator and the controller	Manipulator Cable
FS100 programming pendant dummy connector	Programming pendant dummy connector

Descriptions of the programming pendant keys, buttons, and displays are shown as follows:

Equipment		Manual Designation
Programming Character Keys Pendant		The keys which have characters printed on them are denoted with []. ex. [ENTER]
	Symbol Keys	The keys which have a symbol printed on them are not denoted with [] but depicted with a small picture.
		ex. PAGE key
		The Cursor is an exception, and a picture is not shown.
	Axis Keys Numeric Keys	"Axis Keys" and "Numeric Keys" are generic names for the keys for axis operation and number input.
	Keys pressed simultaneously	When two keys are to be pressed simultaneously, the keys are shown with a "+" sign between them,
		ex. SHIFT key +COORD key
	Mode Key	Three kinds of modes that can be selected by the mode key are denoted as follows: REMOTE, PLAY, or TEACH
	Button	Three buttons on the upper side of the programming pendant are denoted as follows: HOLD button START button EMERGENCY STOP button
	Displays	The menu displayed in the programming pendant is denoted with { }. ex. {JOB}
PC Keyboard		The name of the key is denoted ex. Ctrl key on the keyboard

## Description of the Operation Procedure

In the explanation of the operation procedure, the expression "Select • • • " means that the cursor is moved to the object item and the SELECT key is pressed, or that the item is directly selected by touching the screen.

## Registered Trademark

In this manual, names of companies, corporations, or products are trademarks, registered trademarks, or brand names for each company or corporation. The indications of (R) and TM are omitted.

1 Introductions

1.1 Preparation

#### 1 Introductions

The high-speed Ethernet server function is a new communication protocol to enable high-speed Ethernet communication between the FS100 and external devices such as PC, etc.

Followings are the characteristics of this function.

- (1) It becomes possible to communicate in more than two times higher peed than the present Ethernet server function and more then 5 times higher speed than the present Ethernet data transmission function.
- (2) It combines the present Ethernet data transmission function (host control) and the present Ethernet server function. (except for some functions)
- (3) It corresponds to the file receiving/transmission function to which the present Ethernet server function dose not correspond.
- (4) It is incompatible to the present data transmission function (host control) and the present Ethernet server function. Therefore, MotoCom communication library (Ver3.6), which corresponds to the high-speed Ethernet server function, will be released at the same time.
- (5) It is also possible to create a communication program without using MotoCom since this function is publishing its communication protocol.
- (6) To maintain the compatibility with existing communication software, the present data transmission function and the present Ethernet server function are still available.

#### 1.1 Preparation

This high-speed Ethernet server function is an expansion option to the FS100 Ethernet function. In this reason, when using this function, the PC should be ready to use the FS100 Ethernet function.

#### 1.2 Restriction

- This function cannot use concurrently with MotoPlus function, PP customizing function, other Ethernet functions and the data transmission function (serial).
- To increase the speed, the protocol of this function was modified. Therefore, it has no compatibility with the data transmission function and the Ethernet server function.
  - To retain the compatibility, MotoCom communication library (Ver3.6) will be released at the same time with this function. Please use MotoCom communication library of later version than Ver3.6.

2 System Setting

2.1 Before using the System

## 2 System Setting

To use the high-speed Ethernet server function, configuration of the following settings are required.

### 2.1 Before using the System

The high-speed Ethernet server function is designed as an expansion option to the FS100 Ethernet function. Before using this function, it is required to make the FS100 Ethernet host control function available.

For more details, see "3 Ethernet Function Settings" in "FS100 OPTIONS INSTRUCTIONS FOR Ethernet FUNCTION".

## 2.2 Parameter Setting

Set the following parameters before using this function.

Parameter	Details	Setting value
RS022	Instance 0 permitted (Instance 0 is used as the ordinal data)	1
RS029	A job during the playback operation, Loading of a variable	1
RS034	Timer to wait for a replay	200
RS035	Timer for monitoring end of text	200

## 2.3 Setting of Relevant Parameter

Parameter	Details	When shipping
S2C541	Specify the permission of variable and I/O input during the play mode (0: writing is allowed / 1: writing is not allowed)	1
S2C542	Specify the permission of variable and I/O input during the edit-lock status (0: writing is allowed / 1: writing is not allowed)	1
S2C680	Specify the permission of the batch data backup function (0: INVALID 1: Create RAMDISK at the STARTUP))	1

When setting 0 toS2C541 (writing is allowed), writing is possible even during the playback operation. However, please be noted that this setting may affect the manipulator's cycle time due to some writing timings or their frequencies.

Following are the status to which specifying of the "edit-lock status" is permitted by S2C542 parameter.

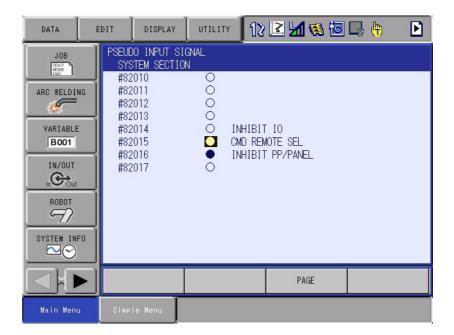

- During an alarm
- When an external memory device is operated
- · When the data transmission function is used
- Specific input EDIT\_LOCK (#40064) is turned ON

- 2 System Setting
- 2.4 Setting of Command Remote

## 2.4 Setting of Command Remote

Set Management mode as Security mode, and select {IN/OUT} – {PSEUDO INPUT SIGNAL} to appear the following display. Move the cursor to the #82015 CMD REMOTE SEL, and press [INTER LOCK] + [SELECT] to select [ON].

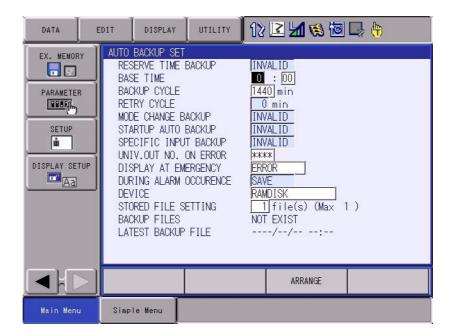

- 2 System Setting
- 2.5 Setting of a Batch Data Backup Function

## 2.5 Setting of a Batch Data Backup Function

With the batch data backup function, the data saved in the FS100 such as system setting or operational condition are collectively backed up by using the command from High Speed Ethernet Server Function. Set the following procedures in advance to use this function.

Set Management mode as Security mode. Select {CONTROLLER SET} + {AUTO BACKUP SET} in the main menu, and following display will appear. Set the DEVICE as "RAMDISK".

The batch data backup function is applicable from version FS1.14 .

- Refer to FS100 Instruction "9.4 Loading the Backup Data from the CompactFlash" for using files from the restore system which is backed up by command from High Speed Ethernet Server Function.
- During an alarm is occurring, it would not be able to change the device. Thus, operate after resetting the alarm.
- When the parameter is S2C680=0, "RAMDISK" will not appear in the "AUTO BACKUP SET" display. Make sure to set the parameter S2C680.

3 Transmission Procedure

3.1 Packet Format

## 3 Transmission Procedure

## 3.1 Packet Format

Transmission packet of the high-speed Ethernet server function is composed of header part (32 byte) + data part (changeable: 479 byte at max.)

The transmission packet consists of "request", which transmits the data from the PC to the FS100, and "answer", which transmits the data from the FS100 to the PC.

The sub-header setting composition of "request" and "answer" are different. And the setting value of the "answer" varies in accordance with the replying contents.

Followings are the format of each packet.

Request (the PC to the FS100)

	■ 4 Byte					
Туре	Byte 0	Byte 1	Byte 2	Byte 3		
Identifier	Fixed character	strings for identif	ication (YERC)		7	
Data size	Header part size (fixed to 0x20)		Data part size (variable value)			
Reserve 1 / processing division	Reserve 1 (fixed to "3")	Processing division	ACK	Request ID		Header part
Block No.				7	(fixed to 32Byte)	
Reserve 2	Reserve2 (fixed to "9999999")					,
Sub-header	Command No.		Instance			
	Attribute	Service (when requested)	Padding			
Data division	Data division (variable:479Byte at maximum)					

3 Transmission Procedure

#### 3.1 Packet Format

## Answer (the FS100 to the PC)

	•	4 6	Byte			
Туре	Byte 0	Byte 1	Byte 2	Byte 3		
Identifier	Fixed character	strings for identifi	cation (YERC)		7	
Data size	Header part size (fixed to 0x20)		Data part size (variable value)			
Reserve 1 / processing division	Reserve 1 Processing (fixed to "3") division		ACK	Request ID		Handan mad
Block No.	Allocate the block number from 0 to0x7fff_ff Add 0x8000_0000 to the last block					Header part (fixed to 32Byte)
Reserve 2	Reserve 2 (fixed to "9999999")				$\neg$	
Sub-header	Service (when replying)	Status: When normal operation:0x00 When abnor- mal operation: other than 0x00	Added status size	Padding		
	Added status size <sup>1)</sup>		Padding		$\exists J$	
Data division	Data division (va	riable:479Byte at	maximum)			

<sup>1</sup> For the details of added status, please refer to chapter 4 "Added Status Code".

3 Transmission Procedure

3.1 Packet Format

Item		Data size	Settings
Identifier		4byte	Fixed to "YERC"
Header part si	ze	2byte	Size of header part (fixed to 0x20)
Data part size		2byte	Size of data part (variable)
Reserve 1		1byte	Fixed to "3"
Processing div	vision	1byte	1: robot control 2: file control
ACK		1byte	Request: 0 Other than request: 1
Request ID		1byte	Identifying ID for command session (increment this ID every time the client side outputs a command. In reply to this, server side answers the received value.)
Block No.		4byte	Request: 0 Answer: add 0x8000_0000 to the last packet. Data transmission other than above: add 1 (max: 0x7FFF_FFFF)
Reserve 2		8byte	Fixed to "9999999"
Sub-header (request)	Command No.	2byte	Execute processing by this command. (conforms to "Class" of CIP communication protocol)
	Instance	2byte	Define SECTION to execute a command. (conforms to "Padding" of CIP communication protocol)
	Attribute	1byte	Define SUB SECTION for executing a command. Attribute: (conforms to "Attribute" of CIP communication protocol)
	Service (request)	1byte	Define data accessing method.
Sub-header	Service (answer)	1byte	Add 0s80 to service (request).
(answer) Status		1byte	0x00: normal reply Other than 0x00: abnormal reply
	Added status size	1byte	Size of added status (0: not specified / 1: 1 WORD data / 2: 2 WORD data)
	Added status	2byte	Error code specified by added status size For details, refer to chapter 4 "Added Status Code".
Padding		Variable	Reserve area

FS100		Transmission Procedure Packet Format
	Detai	ls of sub-header

## • Sub header (request)

Sub header (request)	Command No.		Instance
	Attribute	Service (request)	Padding

## • Sub header (answer/ no added status)

Sub header (request)	Service (answer)	Status: normal: 0x00	Added status: size: 0x00	Padding

## • Sub header (answer/ with added status)

Sub header (request)	Service (answer)	Status: abnormal: other than 0x00	Added status: size:0x01	Padding
	Added status:0x00001010		Padding	

3 Transmission Procedure

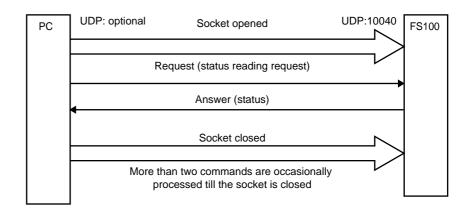

3.2 Outline

#### 3.2 Outline

The transmission/receiving flow of the transmission packet is divided into robot control and file control. Please refer to *chapter 3.3 "Respective Commands for Robot Control" at page 3-18* for the details of respective robot control commands (request/answer) and *chapter 3.4 "File Control Command" at page 3-86* for the details of respective file control commands.

## 3.3.1 Alarm Data Reading Command

#### Request

Sub header part

#### <Details>

Command No.	0x70	
Instance	Specify one out of followings 1: The latest alarm 2: The second alarm from the latest 3: The third alarm from the latest 4: The fourth alarm from the latest	Four alarms are displayed on the P.P display at a time. Specify one out of them.
Attribute	Specify one out of followings 1: Alarm code 2: Alarm data 3: By alarm type 4: Alarm occurring time 5: Alarm character string name	Alarm code means the alarm No. Alarm data means the sub code which supports the alarm contents. There are some cases that the sub code for the occurring alarm would not appear.
Service	Get_Attribute_Single: 0x0E     Get_Attribute_All: 0x01	Specify the accessing method to the data.  0x0E: Read out data of the specified element number  0x01: Read out data of all the element number  (In this case, specify0 to the element number.)

Data part

No data part

#### Answer

Sub header part

#### <Details>

Status	Respond by one in the followings • 0x00 : respond normally • Other than 0x00 : respond abnormally	
Added status size	•0: not specified •1: 1 WORD •2: 2 WORD	"1" indicates 1 WORD of added status data, and "2" indicates 2 WORD of added status data.
Added status	Error code specified by the added status size	The error code of 1 WORD exists if the added status code is "1" and that of 2 WORD exists if the code is "2".

- 3 Transmission Procedure
- 3.3 Respective Commands for Robot Control

For the alarm character strings name, it is transmitted in the form of the character strings whose language code was selected by the programming pendant.

Use the same language code as the FS100, or the characters corrupt in case the client side dose not correspond to its language code.

# 3.3.26 System Information Acquiring Command

### Request

Sub header part

#### <Details>

Command No.	0x89	
Instance	Specify one out of followings • 11 to 12 • 21 to 23 • 101	Specify the type of system type. 11 to 12: Type information (R1 to R2) 21 to 23: Type information (S1 to S3) 101: Application information (User application only)
Attribute	Specify one out of followings 1: System software version 2: Model name / application 3: Parameter version	Specify the type of system information
Service	Get_Attribute_Single: 0x0E     Get_Attribute_Al: 0x01	Specify the accessing method to the data.  0x0E: :Read out data of the specified element number  0x01: Read out data of all the element number  (In this case, specify0 to the element number)

### Answer

## Sub header part

### <Details>

Status	Respond by one in the followings  • 0x00 : respond normally  • Other than 0x00  : respond abnormally	
Added status size	• 0: no added status • 1: 1 WORD • 2: 2 WORD	"1" indicates 1 WORD of added status data, and "2" indicates 2 WORD of added status data.
Added status	The error code specified by the added status size	The error code of 1 WORD exists if the added status code is "1" and that of 2 WORD exists if the code is "2".

# Data part

32bit integer	Byte 0	Byte 1	Byte 2	Byte3	<details></details>
1	System software version (Character strings: 24 characters) Ex. FS1.03.00A (JP/US) -00				The same character strings are returned even if either
2				ters)	11 to 12, 21 to 23 or 101 is specified to the instance in
3	EX. FS1.0	13.00A (JP	703) -00		the request sub-header part.
4					
5					
6	1				
7	Model na	Model name / application			The model name is returned when it is R1 to R2, and NULL character is returned when it is S1 to S3. Also,
8	(Character strings: 16 characters) Ex. (For model) MPP0003-A0*			ters)	
9					application name is returned when it is an application use.
10	(For application) GENERAL				
11	Paramete	Parameter version			R1 to R2: Parameter version
12	(Character strings: 8 characters) Ex. 12.34				When it is nonexistent control group, it is returned in NULL characters.

#### 3.3 Respective Commands for Robot Control

# 3.3.37 Alarm Data Reading Command (for Applying the Sub Code Character Strings)

# Request

Sub header part

#### <Details>

Command No.	0x30A	
Instance	Specify one out of followings 1: The latest alarm 2: The second alarm from the latest 3: The third alarm from the latest 4: The fourth alarm from the latest	Up to four alarms are displayed on the P.P display at the same time. Specify one out of them.
Attribute	Specify one out of followings  1: Alarm code  2: Alarm data  3: By alarm type  4: Alarm occurring time  5: Alarm character string name  6: Sub code data additional information character strings  7:Sub code data character strings  8:Sub code data character strings reverse display information	Alarm code means the alarm No. Alarm data means the sub code which supports the alarm contents. Some alarms may not appear as the sub code. Sub code additional info character strings means the number for alarms from the Servo circuit board [SV#*]or the function safety board[NSU(CPU#*)]. (*denotes number) Sub code data character string reverse display information sets [1], when the characters are reverse.
Service	Get_Attribute_Single: 0x0E Get_Attribute_All: 0x01	Specify the accessing method to the data.  0x0E: Read out data of the specified element number  0x01: Read out data of all the element number  (In this case, specify0 to the element number.)

# Data part

No data part

Answer

# <Details>

Status	Respond by one in the followings  • 0x00 : respond normally  • Other than 0x00  : respond abnormally	
Added status size	O: not specified I: 1 WORD C: 2 WORD	"1" indicates 1 WORD of added status data, and "2" indicates 2 WORD of added status data.
Added status	Error code specified by the added status size	The error code of 1 WORD exists if the added status code is "1" and that of 2 WORD exists if the code is "2".

FS1	00
	OO

# 3.3 Respective Commands for Robot Control

# Data part

32bit integer	Byte 0 Byte 1 Byte 2 Byte3	<details></details>			
1	Alarm code	Range is from 0x0001 to 0x270F(decimal value: 9999)			
2	Alarm data	Setting values vary in accordance with the contents of the alarm type. Also, some alarms are not displayed with the sub code. In this case, the value is zero (0x0).			
3	Alarm type	<ol> <li>No alarm</li> <li>Decimal UNSIGNED SHORT type         (display example: [1])</li> <li>UNSIGNED CHAR bit pattern         (display example: [0000_0001])</li> <li>User axis type (display example: [SLURBT])</li> <li>Spacial coordinate type (display example: [XYZ])</li> <li>Robot coordinate type         (display example: [XYZRXRYRZ])</li> <li>Conveyor characteristic file (display example: [123])</li> <li>Control group type         (display example: [R1R2S1S2])         robot &amp; station</li> <li>Decimal SHORT type (display example: [-1])</li> <li>UNSIGNED SHORT bit pattern         (display example: [0000_0000_0000_0001])</li> <li>Control group type (display example: [R1])         for robot only</li> <li>Control group type (display example: [R1S1B1])         for robot, station and base</li> <li>Control group LOW/HIGH logical axis         (display example: [R1:LOW SLURBT, HIGH         SLURBT])</li> <li>Control group MIN/MAX logical axis         (display example: [R1: MIN SLURBT, MAX         SLURBT])</li> <li>Control group MIN/MAX spacial coordinate         (display example: [R1: MIN XYZ, MAX XYZ])</li> <li>Logical axis of both control group 1 and control         group 2         (display example: [R1: SLURBT, R2: SLURBT])</li> <li>Logical axis 1 and 2 of the control group         (display example: [R1: SLURBT, SLURBT])</li> <li>Logical axis of the control group and UNSIGNED         CHAR type         (display example: [R1: SLURBT, 1])</li> <li>Control group and UNSIGNED CHAR type</li> </ol>			
4 to 7	Alarm occurring time (Character strings of 16 letters) Ex.2011/10/10 15:49				
8 to 15	Alarm character strings name (character strings: 32 letters)	It is transmitted in the form of the character strings whose language code was selected by the programming pendant and half- and full-width characters are mixed.			
16 to 19	Sub code data additional information character strings (Character strings of 16 letters)	[SV#1] indicates the servo board number 1. [NSU(CPU#1)] indicates that an alarm is found in the function safety unit CPU#1.			
20 to 43	Sub code data character strings (Character strings of 96 letters)				
44 to 67	Sub code data character strings reverse display information (Character strings of 96 letters)	Regular characters show [0] and reverse characters show [1]. (display example: [ R2S1S2])			

3 Transmission Procedure

3.3 Respective Commands for Robot Control

For the alarm character strings name, it is transmitted in the form of the character strings whose language code was selected by the programming pendant.

Use the same language code as the FS100, or the characters corrupt in case the client side dose not correspond to its language code.

To set the batch data backup function, set the device as "RAMDISK" as in advance.

It takes about ten minutes to finish backing-up the data by using the batch data backup function.

Refer to chapter 2.5 "Setting of a Batch Data Backup Function" at page 2-2 for more detail.

# 4 Added Status Code

Added status code	Details
1010	Command error
1011	Error in number of command operands
1012	Command operand value range over
1013	Command operand length error
1020	Disk full of files
2010	Manipulator operating
2020	Hold by programming pendant
2030	Hold by playback panel
2040	External hold
2050	Command hold
2060	Error/alarm occurring
2070	Servo OFF
2080	Incorrect mode
2090	File accessing by other function
2100	Command remote not set
2110	This data cannot be accessed
2120	This data cannot be loaded
2130	Editing
2150	Running the coordinate conversion function
3010	Turn ON the servo power
3040	Perform home positioning
3050	Confirm positions
3070	Current value not made
3220	Panel lock; mode/cycle prohibit signal is ON
3230	Panel lock; start prohibit signal is ON
3350	User coordinate is not taught
3360	User coordinate is destroyed
3370	Incorrect control group
3380	Incorrect base axis data
3390	Relative job conversion prohibited (at CVTRJ)
3400	Master job call prohibited (parameter)
3410	Master job call prohibited (lamp ON during operation)
3420	Master job call prohibited (teach lock)
3430	Robot calibration data not defined
3450	Servo power cannot be turned ON
3460	Coordinate system cannot be set
4010	Insufficient memory capacity (job registered memory)
4012	Insufficient memory capacity (position data registered memory)
4020	Job editing prohibited
4030	Same job name exists
4040	No specified job
	1

# Added Status Code

FS100

Added status code	Details
4060	Set an execution job
4120	Position data is destroyed
4130	Position data not exist
4140	Incorrect position variable type
4150	END instruction for job which is not master job
4170	Instruction data is destroyed
4190	Invalid character in job name
4200	Invalid character in the label name
4230	Invalid instruction in this system
4420	No step in job to be converted
4430	Already converted
4480	Teach user coordinate
4490	Relative job/ independent control function not permitted
5110	Syntax error (syntax of instruction)
5120	Position data error
5130	No NOP or END
5170	Format error (incorrect format)
5180	Incorrect number of data
5200	Data range over
5310	Syntax error (except instruction)
5340	Error in pseudo instruction specification
5370	Error in condition file data record
5390	Error in JOB data record
5430	System data not same
5480	Incorrect welding function type
6010	The robot/station is under the operation
6020	Not enough memory of the specified device
6030	Cannot be accessed to the specified device
6040	Unexpected auto backup request
6050	CMOS size is over the RAM area
6060	No memory allocation at the power supply on
6070	Accessing error to backup file information
6080	Failed in sorting backup file (Remove)
6090	Failed in sorting backup file (Rename)
6100	Drive name exceeds the specified values
6110	Incorrect device
6120	System error
6130	Auto backup is not available
6140	Cannot be backed up under the auto backup
A000	Undefined command
A001	Instance error
A002	Attribute error
A101	Replying data part size error (hardware limit)
B001	Replying data part size error (software limit)
B002	Data use prohibited

#### Added Status Code

Added status code	Details
B003	Requiring data size error
B004	Outside the data
B005	Data undefined
B006	Specified application unregistered
B007	Specified type unregistered
B008	Control group setting error
B009	Speed setting error
B00A	Operating speed is not setting
B00B	Operation coordinate system setting error
B00C	Type setting error
B00D	Tool No. setting error
B00E	User No. setting error
C001	Address error
C002	System error
C003	System error
C800	System error
CFFF	Other error
E2B3	File not found
E24F	Parameter setting wrong

 Added status code 2150: Running the coordinate conversion function

This error occurs when executes the axis configuration information reading command at the following screen displays.

- · Parallel shift job conversion display
- · Mirror shift conversion display
- PAM display

- Relative job conversion display
- PMT conversion display
- · Position modification display
- · Arm bend compensate display
- · User coordinate shift display
- Gun teaching position modification display
- 4 point teaching display

It is not only conditions above, but also the error occurs while executing the PMT instruction.
